GENERAL CARE

Cleaning and Maintenance

Routine cleaning preserves the finish and service life of every Ironwood partition. Use the guidance below for each material and for the hardware common to all configurations. Test a cleaner suitable for the material on a concealed area before use.

MATERIAL CARE

MATERIAL	CARE
Compact Laminate (CPL)	Clean with mild soap and water, a non-abrasive cleaner, or standard restroom cleaning chemicals. Rinse and wipe dry. Avoid abrasive cleaners and scouring pads, which dull the finish.
Engineered Stone	Clean with mild soap and water or a stone-specific cleaner. Rinse and dry with a soft cloth. Avoid acidic or abrasive cleaners. Acidic cleaners etch and dull the polished finish.
High Pressure Laminate (HPL)	High Pressure Laminate is not intended for direct water exposure or continuously wet conditions. Clean with mild soap and water or a non-abrasive household cleaner. Rinse thoroughly and wipe dry. Do not use abrasive cleaners, scouring pads, or steel wool. These damage the laminate surface and void the HPL warranty.
Solid Surface	Clean with mild soap and water or a non-abrasive household cleaner. Wipe dry after cleaning. Avoid abrasive cleaners. Minor scratches can be repaired by a trained technician.
Wood Veneer	Wood Veneer is intended for interior, climate-controlled restrooms. Dust regularly and clean with a damp cloth and a mild wood cleaner. Rinse and wipe dry promptly. Avoid excess moisture, abrasive cleaners, scouring pads, and harsh chemicals.

HARDWARE CARE

ITEM	CARE
Stainless steel hardware	Wipe with a soft damp cloth and dry to prevent water spotting.
Brackets and pilaster shoes	Wipe clean. Do not use abrasive pads that scratch the finish.
Latches and pulls	Keep moving parts free of debris. Lubricate sparingly if action stiffens.
Hinges	Lubricate if necessary.
Fasteners	Inspect periodically and retighten any loosened by use.

WHAT TO AVOID

DO NOT USE	REASON
Abrasive scouring pads	Scratches and dulls the surface finish.
Strong solvents	Can soften, discolor, or etch laminate and solid surfaces.
Wax-based polishes	Builds a film that traps soil and attracts streaking.
